

Clean & Capture

CLEAN: Each tool has nozzles that can spray water, RadOut, or any other chemical, while a powerful suction is generated with Prodigy Bio drawing all the particulates out of the surface you are cleaning and capturing them back in a holding tank and then treated.

CAPTURE: The waste material is captured with Clean and Capture then cleaned with our filtration system capable of producing a drinkable water solution.

A Powerful combination: The Prodigy Bio is a particularly powerful partner for this technology. With over 4000 PSI of pressure available, 21H.G. of suction, a stainless steel construction with a large holding tank, and the ability to run up to 1000 feet of hose, the Prodigy Bio makes the perfect combination for the Clean and Capture tools.

10,000 Cycles Per Second!

WHAT IS CLEAN AND CAPTURE? Clean and Capture is a proprietary technology of PowerPlus Professional Cleaning Solutions that utilizes heat, suction, pressure, and chemical properties to achieve a decontamination solution second to none. The PRODIGY BIO is completely integrated with this system that can provide a safe, inexpensive, way to reclaim contaminated areas.
