

# Clean & Capture

**CLEAN:** Each tool has nozzles that can spray water or any other chemical, while a powerful suction is generated with Prodigy Bio drawing all the particulates out of the surface you are cleaning and capturing them back in a holding tank and then treated.

**CAPTURE:** The oil and other particulates are captured with Clean and Capture then cleaned with our filtration system capable of producing a drinkable water solution. It can also leave surfaces in a near new condition after the deep cleaning.

**A Powerful combination:** The Prodigy Bio is a particularly powerful partner for this technology. With over 4000 PSI of pressure available, 21H.G. of suction, a stainless steel construction with a large holding tank, and the ability to run up to 1000 feet of hose, the Prodigy Bio makes the perfect combination for the Clean and Capture tools.

**10,000 Cycles Per Second!**

**WHAT IS CLEAN AND CAPTURE?** Clean and Capture is a proprietary technology of PowerPlus Professional Cleaning Solutions that utilizes heat, suction, pressure, and chemical properties to achieve a decontamination solution second to none. The PRODIGY BIO is completely integrated with this system that can provide a safe, inexpensive, way to reclaim contaminated areas.
