

CES System

CES Components:

- Clean and Capture tools and technology
- Prodigy Bio
- C3 Technology
- S.O.V.C. Technology
- S.E.P. Technology
- CES - Procedures
- CES - PASS Software
- Oil/Water Separator

CES (Contamination Extraction System): is a culmination of technology and procedures. It is what allows **PowerPlus Cleaning Solutions** to clean soil, crops, and trees while maintaining the integrity of the surfaces being cleaned.

Different: CES is different in the fact that it is a complete solution and package. The technology ranges from knowing how to remove oil and contaminants from any surface, it also address environmental issues such as oil run-off, maintaining the eco- systems and helps the environment heal itself.

Effective: The CES system is all together effective and cost efficient. No scraping of the soil, no cutting trees down, no destroying homes and lives to remove the threat of oil contamination. Decontaminate in place and in the harshest conditions with CES.

CES Value:

- Cost effective
- Environmentally friendly
- Proven technology
- Complete package
- Ground water protection
- High decontamination effectiveness
- No hazardous waste created
- Soil nutrients can be added in the process
