

CES System

CES (Contamination Extraction System): is a culmination of technology and procedures. It is what allows **PowerPlus Cleaning Solutions** to clean soil, crops, and trees while maintaining the integrity of the surfaces being cleaned.

Different: CES is different in the fact that it is a complete solution and package. The technology ranges from knowing how to remove radiation and contaminants from any surface, it also address environmental issues such as radioactive run-off, maintaining the eco systems and helps the environment heal itself.

Effective: The CES System is all together effective and cost efficient. Chemicals can infect the soil and ground water, but the CES System can repair the lands in place reducing costs and worries of contaminations.

CES Value:

- Cost effective
- Environmentally friendly
- Proven technology
- Complete package
- Ground water protection
- High decontamination effectiveness

CES Components:

- Clean and Capture tools and technology
- Prodigy Bio
- C3 Technology
- S.O.V.C. Technology
- S.E.P. Technology
- CES - Procedures
- CES - PASS Software
- FYCC- Technology
